## On Site Ladder & Equipment Inspections

Essener Equipment Co. can offer on site Ladder Inspections that can be carried out at 3, 6 or 12\* monthly intervals.

### The Health and Safety Executive has stated:

- All work at height is properly planned and organised
- Those involved in work at height are competent.
- **Equipment for work at height is properly inspected and maintained**

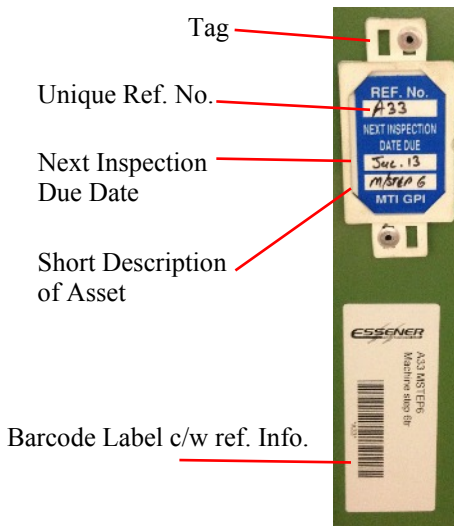

\* HSE advises statutory minimum 12 monthly inspection

Our on-site Health & Safety checks cover the inspection of all access equipment within the factory site, from general ladders and steps to machine stairways, tower scaffold and work platforms, in addition we also carry out inspections of general material handling equipment in the same manner, by Ladder Association.

During our inspections each item is tagged, referenced, bar-coded and registered to a unique database held on our handheld computers This is then uploaded to our system which emails a detailed report and test cert to our customers, these reports and detailed history of each asset are easily accessed at anytime and should any item be found to be faulty at your request we can repair or replace.

All the products inspected will have a 'Next Inspection Date' on them, Our system will automatically contact you via email before the next inspection is due, as a reminder that we will be coming on site. If you have any problems or need an item inspecting between your scheduled visits, we will be more than happy to call in and help with your query.

We currently carry out inspections for many local councils, theatre's, factories, leisure centres, schools and hospitals

Ladders Register with Inspection Summary  
06 Feb 2013

Name	Current State	Current Status	Location	Manufacturer	Material	Shape	Type	Date Purchased	Description
	In Use	Pass	SP 44343	Uipen's Jones	Aluminium	Extension		27 Feb 12
